

Chief Product Officer | UX Leader | Full-Stack Engineer | User-Facing Systems

Rito sees between the seams. And he builds.

Rito is a cross-functional authority specializing in user-facing systems, with an M.S. in Human-Computer Interaction. He brings depth across Product, Brand, UX, and Engineering to make important outcomes more predictable by addressing misalignments and ambiguities that are hard to see or manage. **How?** He traces symptoms to their causes across domains, then repairs the system or improves decision-making around it. — He sees between the seams. And he builds. — He's grounded in over a decade of startup experience, has built systems end-to-end, and has contributed in some of the most rigorous open-source engineering environments.

Engagement Models:

- **Fractional Leader** — Embedded strategic partner who helps make consequential decisions and participates directly in the execution.
- **Advisory** — Senior cross-functional judgment for consequential decisions, helping you navigate trade-offs and ambiguity.
- **Studio Delivery** — Independently takes responsibility for building & delivering a defined product, MVP, or system; bringing in the right specialists.

For Investors:

- **Product-Systems Diligence** — He can see through layers and ambiguity to identify risks and assess whether what they've built, what they promise, and where they're heading are actually coherent and support the investment thesis.
- **Operating Partner Support** — Help portfolio startups clarify complex decisions, resolve misalignments and strengthen user-facing outcomes.

Call me when:

- The product works, but there are issues with acquisition or churn and the cause is unclear or messy.
- There are noticeable gaps between specialists, and the product or direction seem incoherent.
- You're exploring a new initiative or direction, and need to make the complexity and trade-offs across Product, Brand, UX, and Engineering more clear and actionable before you commit.

Testimonial:

-Quote Source-

This guy is a strategic thinker and marketing planner & doer. 60-page deck to define your product image? **No problem.** Pitch your project to a committee, who doesn't even know what they want? **You got it.** Go from zero-to-guru in a month to understand your market in technical niche detail? **Done.** Self-starter, comes back with solutions before you've specced the problem? **On it.** I've personally seen him deliver each of these. **So money.** And has full product turns under belt. -William Entriken, Lead Author of ERC-721, **key pioneer of the multi-billion dollar NFT Ecosystem**

Rito's independent [fansite](#) that he personally built for celebrity fashion model & singer Caroline Vreeland was highlighted in a [New York Times](#) article profiling her; it was used in her introduction as an authority signal of her influence & popularity.

Rito partnered with William Entriken, the blockchain pioneer responsible for the first mainstream NFT standard which coined the term itself, to co-author a [new Ethereum standard](#) (ERC) that they explored pushing for adoption in the Rarible Protocol's eco-system. From working closely with and learning about William, Rito conducted a strategic brand repositioning to pivot him from "the NFT guy" into a polymathic persona by launching [WilliamEntriken.net](#).

Rito conducted an [independent campaign](#) where he (1) did quality assurance cataloging bugs he found in Call of Duty: Warzone, (2) created infotaining videos of the bugs released publicly (3) pitched the content to journalists and received global earned media coverage across various prominent outlets like [ScreenRant](#), [Gfinity Esports](#), [Dexerto](#), [GameRant](#), [CharlieINTEL](#) and (4) resulted in the AAA studio fixing the bugs on 3 separate occasions.

During NYFW 2023, Rito was featured alongside celebrity fashion designers Romeo Hunte & Pamela Dennis in a future-forward [interactive fashion show](#). Rito's team built wearable tech accessories that his fellow designers' models wore, allowing the audience to interact with their collections virtually.

Live on air Rito was given a feature interview on [The Other Side of Midnight](#) with Frank Morano where he shared insights on technology including blockchain and metaverses and even impromptu answered questions in the form of spoken-word lyrics mid-conversation, and performed a closing crypto-themed song!

Stockhead published a [feature interview](#) with Rito sharing his insights on blockchains, cryptocurrencies and metaverses while including spoken-word lyrical responses to provide an infotaining slant to the discourse.

Open Source Contributions:

Rito has shipped upstream contributions across major Open Source Software ecosystems including Git, the Linux Kernel, Ethereum EIPs, OWASP, ZAP, Kubernetes, LangChain, Storybook, and systemd. The work spans developer experience, mobile usability, accessibility, front-end architecture, publishing pipelines, and documentation infrastructure across high-trust developer surfaces. See the [case study](#) with a catalog of merges, or his [GitHub](#) profile.

Selected impact:

- **Core Infrastructure** — Made Git's built-in gitweb source browser [work properly on mobile devices](#), later released in Git v2.54.0. Shipped upstream Public Inbox improvements along with public advocacy to leadership that led to the [Linux Kernel Mailing List](#) archive also working properly on mobile devices.

- **OWASP Ecosystem** — Rescued site-wide mobile breakage in the shared OWASP theme, OWASP Top 10 2026, and contributed across two generations of VWAD, from legacy table rescue and Advanced Search features to architectural foundations supporting metadata publishing and SEO page indexing.

- **Ethereum EIPs** — Audited and fixed systemic mobile layout breakage across 100+ Ethereum EIP/ERC standards pages, including foundational references like ERC-721 and 20; now contributing to [EIP Working Group](#) developer tooling around local builds, validation workflows, and standards-site architecture.

Showcase:

RitoSwap is a massive solo-built proof of cross-domain execution in the form of a Web3 dApp and musical AI-based game. It combines custom ERC-721 NFTs, access control, cross-chain swaps, portfolio UX, protected media delivery, and a multimodal AI rap-battle runtime tied into live blockchain state. The project is Open Sourced on [GitHub](#), has live [mainnet](#) and [testnet](#) deployments, a deep [documentation site](#) with interactive playgrounds, and a [Storybook UI-staging site](#).
